# CAM350
## Release 8.5

# Improving PCB Success
## with Powerful CAM Solutions

*CAM350 Release 8.5 delivers unprecedented usability and performance for the mainstream CAM marketplace. With CAM350 Release 8.5 PCB Designers and CAM Engineers are more productive than ever before!*
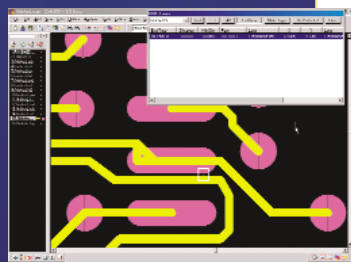

### Design For Fabrication

- Analysis results are graphically displayed in a simple, easy-to-follow format
- Violations can be immediately viewed and potential problems instantly fixed
- Analysis checks take only seconds...even on complex boards
- View errors in the design database, make appropriate changes, ensure data integrity

### Netlist Comparison

- Enhanced, superior, comparison process reduces verification time
- Compares CAM outputs against original engineering intent
- Minimizes potential electrical defects
- Graphically highlights discrepancies using contrasting colors
- Automatic "Go-To-Error" screen display of violations
- Sorting and prioritization of errors - size, type, location, etc.
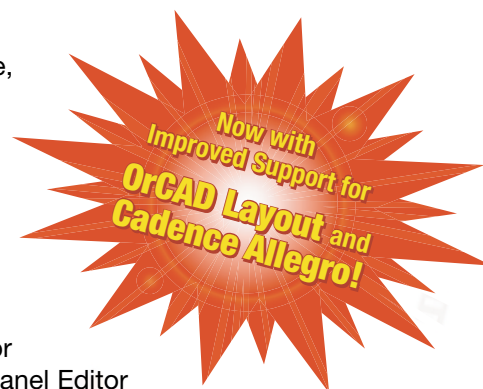

### Fabrication Design Rule Checks

- Validate errors quickly and accurately
- Sortable reports linked to graphical display
- View multiple errors, sort by error type, size, features, etc.
- Quickly run and verify analysis results
- Run globally, or window specific areas

Now with Improved Support for OrCAD Layout and Cadence Allegro!

### Panelization

- Merge panel templates into the Panel Editor
- Import Gerber, Mill and Drill data into the Panel Editor
- Rotate or mirror images and symbols in the Panel Editor
- Rotate panel in the Panel Editor
